

COLLABORATION: EMPOWERING COMMUNITIES TO DELIVER THEMSELVES

BLOG Reprint Individuals have the power to improve the environment they live and work in. Yet, their voices frequently get drowned in the corporate noise when the priorities of corporations differ from those of the individuals themselves. The time has come for technology to become its own best propagator, through ongoing collaboration between the users and those that create it. There is a need to cross the chasm, the digital divide - not just here, but everywhere around the world. Life has equal value. Saving life is no different. Doctors and nurses can use technology to save more lives and positively impact the well being of thousands more.

With the advent of the Internet and SaaS, the time has arrived for a new kind of community that has no boundaries, one that bases the development on collaborative best effort - not on development of singular and distinctive captive technology. Individuals within these communities can now begin to get empowered and capable of delivering themselves from situations down the road - when they become unwilling patients themselves.

Healthcare is a highly specialized and extremely complex business that continues to grow exponentially in the amount of data it creates. Healthcare professionals worldwide are respected for their ability to thrive and work in such demanding and ever-changing environments. They face new requirements and evolutionary changes of existing ones with great endurance and patience - whether it is medication safety alerts, refills, new reporting, pay for performance, quality measures or HMO related formularies, insurance approvals or authorization rules. And this is on top of all the other basic business processes that need constant monitoring and alerts - whether it is health maintenance issues or patient recalls or consultation reports or abnormal labs.

ONDEMAND HEALTHCARE .net team is a great mix of healthcare professionals like yourself who live and breathe in this environment on a daily basis and highly experienced software specialists in Information Technology as it relates to the concepts of the National Health Information Network of tomorrow. We understand the challenges that IT investments can involve at your end. IT headaches are the last thing that you need to get distracted by. They can not only consume a lot of time and energy but also leave you poorer and stranded with patient information locked in outdated proprietary systems. The Physicians, Nurses, Pharmacists and Case Managers and IT professionals on our collaborative groups have solved exactly these challenges.

While we cannot take away your business challenges, we can certainly make it simple for you to embrace the obvious advantages that technology has the power to bring to your practice environment - advantages that you all know of but couldn't afford; benefits that you have known can be delivered but no one has come forward to offer payment for.

COLLABORATION: EMPOWERING COMMUNITIES TO DELIVER THEMSELVES

Our SaaS model is the most affordable out there. It is based on cutting edge technology empowered by solutions that offer far more functionality than traditional systems- all designed and delivered by our collaborative group. They are innovative, user friendly and will enable you to continue to focus on managing your business. ONDEMAND HEALTHCARE .net team promises to take care of your software and network needs while you continue to take care of your patients and your non-IT business needs.

In keeping our end users in mind and improved patient outcomes at the center of this, we have simplified the use of software in healthcare by removing ambiguity and decreasing complexity. What you see is what you get. There are no hidden fees or captive contracts. We have not just eliminated equipment purchase costs today but also your downstream upgrade costs.

We do not sell your personal information or patients information. That's our promise.
